

Underwater Place Value Adventures with Coral the Clownfish

Math

Grade 2

Underwater Theme

Help our underwater friends solve place value mysteries by figuring out how many tens and ones they discover on their ocean quests!

NAME _____

DATE _____

SCORE _____ / 8

1

Coral the clownfish found a treasure chest with 24 shiny pearls inside. How many tens and how many ones are in 24?

2

Shelly the sea turtle collected shells along the ocean floor and counted 37 shells total. She wants to group them by tens. How many tens and how many ones does she have?

3

Bubbles the dolphin caught 15 fish for lunch. If he wants to know the place value, how many tens and how many ones are in 15?

4

A friendly octopus named Otto found 48 starfish hiding in the sea grass. When Otto organizes them into groups of ten, how many tens and how many ones will he have?

5

Marina the mermaid discovered 32 colorful rocks at the bottom of the ocean. She's making bundles of tens for her collection. How many complete tens and how many leftover ones does she have?

6

Pete the pufferfish counted 56 water bubbles floating past his coral home. What is the place value? How many tens and how many ones?

7

Splash the seahorse swam past 29 sea anemones on his adventure. He wants to show them as tens and ones. How many tens and how many ones are in 29?

8

The wise old whale told Coral that she saw 63 different types of fish this week. Help Coral understand: how many tens and how many ones are in 63?
