1

Astronaut Alex discovered 15 shiny space crystals floating near Mars. She used 7 crystals to power her rocket ship. How many crystals does Alex have left for her collection?

2

Captain Comet was flying 12 friendly alien friends to the Space Station, but 5 of them got off at the Moon Base. How many alien friends are still on Captain Comet's spaceship?

3

The robot rover Rio found 18 moon rocks while exploring a crater on the Moon. It gave 6 rocks to the Space Lab. How many moon rocks does Rio still have in its collection?

4

Princess Luna had 14 glow-in-the-dark star stickers for her spaceship wall. She gave 8 stickers to her space buddy. How many stickers does Princess Luna have remaining?

5

Asteroid Andy collected 20 pieces of space dust during his mission. He sprinkled 9 pieces across the galaxy as a trail home. How much space dust does Andy still have?

6

The Space Station had 17 floating food packets. The hungry astronauts ate 8 packets for lunch. How many food packets are left floating in the Station?

7

Nebula the explorer spotted 16 twinkling stars near Jupiter. 7 of the stars disappeared behind a cloud of cosmic dust. How many stars can Nebula still see?

8

Satellite Sam was guarding 13 important space files when 6 files got uploaded to Earth. How many space files does Sam still need to protect on the spacecraft?
