SCORE \_\_\_\_\_ / 8

1

Captain Zorp discovered 12 glowing crystals floating near the asteroid belt. She wants to share them equally among her 3 crew members. How many crystals does each crew member get?

---

---

---

2

Astronaut Nova found 20 moon rocks on the surface of Planet Gleam. She packed them into 5 equal bags to bring back to the space station. How many moon rocks are in each bag?

---

---

---

3

The Mars base received 18 oxygen tanks in a supply delivery. The commander needs to divide them equally among 6 different lab stations. How many oxygen tanks will each station receive?

---

---

---

4

Robot Rex collected 24 space samples during his mission to the rings of Saturn. He wants to organize them into 8 display cases with an equal number in each. How many samples go in each case?

---

---

---

5

Princess Stella of the Andromeda Galaxy has 15 golden meteorites to distribute equally among her 3 royal vaults. How many meteorites will be stored in each vault?

---

---

---

6

The space station's kitchen has 16 freeze-dried meals to divide equally for 4 astronauts going on a spacewalk. How many meals does each astronaut get?

---

---

---

7

Pilot Comet spotted 27 shooting stars during the night sky patrol. He wants to record them in his 3 observation logs with an equal number of stars in each. How many shooting stars should be in each log?
