

Rainforest Adventures: Word Problem Quest with Jungle Friends

Math

Grade 3

Rainforest Theme

Help the rainforest creatures solve their exciting adventures by reading each story carefully and finding the answer to their challenges.

NAME _____

DATE _____

SCORE _____ / 8

1

Pip the parrot found some shiny seeds in the treetop. She collected 12 seeds on Monday and 15 seeds on Tuesday. How many seeds did Pip collect altogether during her two-day treasure hunt?

2

The jaguar family was hunting for food in the rainforest. There were 8 jaguars resting by the river. Then 5 more jaguars came to join them. How many jaguars are at the river now?

3

Bella the butterfly was visiting flowers to drink nectar. She visited 28 flowers in the morning and 14 flowers in the afternoon. How many more flowers did she visit in the morning than the afternoon?

4

The monkey troop was gathering bananas from the tallest trees. They collected 35 bananas and decided to share them equally among 5 monkeys. How many bananas does each monkey get?

5

Rosa the river dolphin swam past 9 lily pads on Monday, 12 lily pads on Wednesday, and 8 lily pads on Friday. What is the total number of lily pads Rosa swam past during her rainforest adventures?

6

The anaconda snake was measuring the length of different vines. One vine was 24 feet long and another vine was 18 feet long. What is the total length of both vines?

7

Tommy the toucan had 40 colorful feathers in his tail. He lost 16 feathers when he flew through the dense rainforest. How many feathers does Tommy have left?

8

The sloth family was moving slowly through the trees collecting leaves to eat. If there are 3 adult sloths and each adult has 2 babies, how many sloths are in the family altogether?
