Dragons of Berk: Long Division Adventures

Math **Grade 4** **Dragons Theme**

🐉 **Help Hiccup and the dragon riders solve these long division problems from their adventures around Berk!**

NAME _____

DATE _____

SCORE _____ / 8

1

Hiccup discovered 156 fish in the great storehouse that need to be divided equally among 4 hungry dragons. How many fish will each dragon get?

2

Toothless collected 245 shiny stones for his treasure cave. He wants to arrange them equally into 5 piles to protect different corners of his lair. How many stones should go in each pile?

3

Astrid's dragon Stormfly laid 288 dragon eggs across 6 different nests on Dragon Island. If each nest has the same number of eggs, how many eggs are in each nest?

4

The dragon training academy has 432 dried fish treats to distribute equally to 8 dragons for their training exercises. How many treats does each dragon receive?

5

Snotlout found 364 dragon scales scattered around the volcano. He wants to make 7 identical dragon armor pieces, using the same number of scales in each. How many scales will be in each piece?

6

Fishlegs discovered 576 ancient dragon runes in the hidden library that need to be sorted into 9 equal groups for study. How many runes should be in each group?

7

The dragon riders collected 312 pieces of dragon food during their journey and need to split it equally for 6 dragons on their expedition. How much food does each dragon get?

8

Hiccup's workshop has 525 metal scraps left over from building dragon gear. He wants to divide them equally among 3 different repair projects. How many scraps will each project receive?

Answer Key
